Specializing in Manufacturing Process Design & Integration

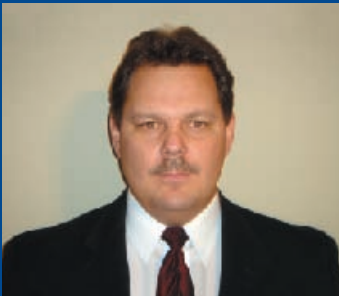

A Design Systems Corporate Update

www.DSI-Solutions.com

JANUARY 2007

Design Systems, Inc.... 23 Years and Still Going Strong

DSI has grown steadily over the past 23 years into one of the industry's premier manufacturing process engineering companies. From our perspective, the world is indeed getting smaller, as is evident by the demand for our people and services around the world. Although there are many countries with a wealth of graduating engineers in various fields, the manufacturing engineering skills and experience we have developed here in the Motor City are sought not only by automobile manufacturers but also a variety of manufacturing companies around the world.

*Dan Birchmeier
Director of Sales
and Marketing*

I credit our longevity and success to maintaining our focus on providing quality work and continually developing new services to support the needs of our customers. We have maintained a core group of long term dedicated employees with many of us having over 20 years of service with DSI. Our experienced staff welcomes the opportunity to support you with your manufacturing engineering or project integration needs.

I want to thank all of you – our customers - for your support and encourage you to give me a call if you have any questions on the many engineering services we provide.

Sincerely,

Dan Birchmeier
Director of Sales and Marketing

WHAT'S INSIDE:

Packaging Engineering and Consulting

From concept development through production implementation, Design Systems, Inc. Packaging & Containerization Group can handle it. Serving industries such as automotive, food & beverage, pharmaceutical, and consumer products, DSI's team can bring best-in-class practices to your operation.

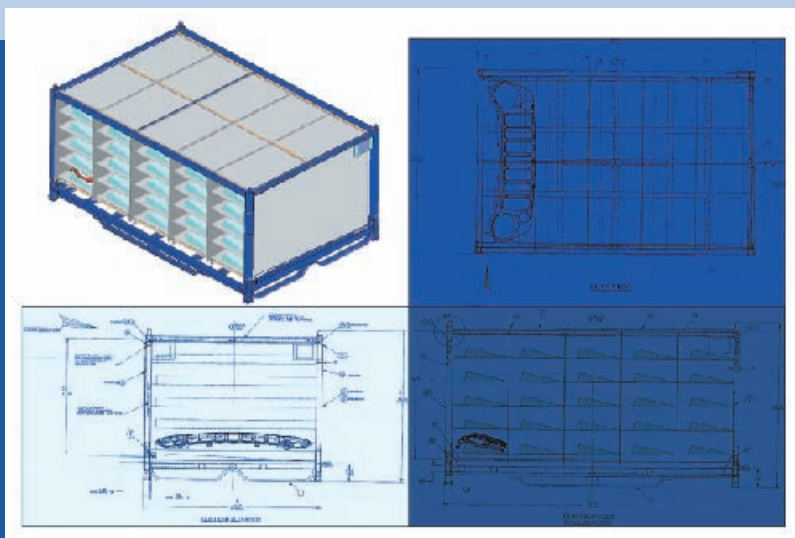

Our team of packaging engineers are able to undertake complete program management activities from concept through the launch of your product. Working as an extension of your internal resources, we are capable of identifying your part/production needs and tailoring packaging container/rack designs to meet your budget and functionality requirements.

Services Include:

- Perform R&D to provide packaging / container / rack material design concepts
- Champion meetings and drive container programs with your internal groups to achieve concept design and prototype buyoffs
- Identify specifications for packaging material design and functionality that are specific to your product needs
- Prepare and distribute competitive bid packages for production RFQ.
- Evaluation of bids and recommendations for supplier selection
- Manage prototype and production build; oversee validation testing
- Information management and program tracking for all of the relevant part data. DSI's internal "pack-man" database provides status reports for each part.
