Parcel and Package Handling

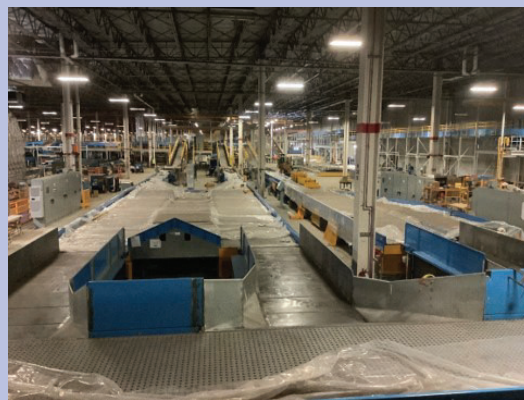

Design Systems, Inc. is a client-focused professional services firm providing Engineering and Consulting services to parcel and package clients across North America. Highly experienced with a diverse engineering skill set, Design Systems, Inc. supports clients with process design and professional Project Management services from concept through commissioning. Our goal is to be an extension of our customer's engineering team and support the execution of their projects. Our team provides engineering support to help our customer ensure on-schedule start-ups, reduce project costs, and work with contractors to improve First Time Right (FTR) engineering and installation practices.
